

## HOMEMADE FIREWORKS Pt. 1

By The Magician...

Of all of mankind's inventions throughout the ages, fireworks must rate as one of the most spectacular and enjoyable. Unfortunately, due to a small percentage of people who mis-use fireworks (such as by throwing them at people, and using them for destruction) we all must suffer. In 1967 the federal government all but outlawed and class c firecrackers over 50 grains of powder. Thus no more M-80s, cherry bombs or block busters. On top of this, many states have outlawed the sale or possession of fireworks entirely!

For those that still have a love for fireworks, there are some options. The first is to buy them illegally. M-80s etc. are still readily available on the blackmarket. Another way is to have friends going on vacations etc. buy them for you in states where they are still legal and bring them back. (You will not be able to get M-80s etc. this way). A third possibility is to build your own, and have fun doing it!

In a divergence from our normal electronic discussions, I will tell you in this, and a subsequent article exactly how to build some of your own homemade fireworks devices.

First lets discuss VERY important safety procedures. IF YOU DO NOT HEED ALL OF THESE SAFETY PROCEDURES, YOU HAVE A VERY GOOD CHANCE OF BLOWING YOUR HEAD OFF !! If you follow them, risk is minimal, and relatively safe. Neither TAP nor the Author can take any responsibility for any injuries or damage resulting from the following information.

### RULES:

1. Wear eye goggles to prevent eye injuries.
2. Keep chemicals in a cool, dry SAFE place.
3. Never smoke or have any flames around your work area.
4. have a fire extinguisher and water close by.
5. When mixing chemicals, do so very gently. Do not grind together
6. Mix only very small quantities of chemicals at any one time.
7. Use only paper casings. NEVER put mixtures in any metal or glass containers (such as CO2 cylinders)
8. If you have a dud, leave it until the next day and then bury it. do not try to reuse it.
9. Several books on fireworks now available from publishers recommend mixing chlorates (Such as Potassium Chlorate) with sulfur for explosive compound. This can be SUICIDE ! The chlorates can react spontaneously with sulfur and blow up for no apparent reason. At best the mixture is extremely unstable and will blow up with only a slight jar or change in temperature ! So, NEVER mix sulfur and chlorates.
10. Last but not least, USE COMMON SENSE !

Now down to the good stuff. We will first discuss making M-80s. You will need four basic components. A paper case, end plugs, safety fuse, and powder. The case can be purchased (recommended) from one of the distributors listed later, or can be made by taking a grocery bag, cutting about a 1.5 inch width strip about 12 inches long, coating it with elmers glue, then wrapping it up around a wood dowel and allowed to harden.

The end plugs are easily made by cutting an approx. 1/4 inch length of appropriate width wood dowel (same size used to role case) The safety fuse is best bought from a distributor 3/32 inch being the standard.

The powder is made as follows:

In a non-metal bowl, grind either potassium chlorate or potassium perchlorate until it is very fine with no lumps, then weigh the powder. take some black aluminum dust and weight it getting a proportion (by weight) of approx. 7 parts potassium chlorate/ perchlorate to 3 parts aluminum dust.

After weighing, very carefully thoroughly mix the two chemicals together in a non-metal bowl being careful not to grind or crush them.

Drill a small hole in the top of your casing (not anywhere near the chemicals) and insert approx. 3 inches or more fuse so that the fuse hits the bottom of the casing. Put a little elmers glue around the hole to seal the fuse. Coat one of your endplugs with elmers and insert it into one end of your casing so that it is flush with the end. Pour powder into the casing until it is about 1/2 full. Filling it only 1/2 gives the powder room to burn and will explode much louder than it would if totally filled.

**TAP**  
Room 603  
147 W. 42 St.  
New York 10036

**FEBRUARY 1982 No. 72**

Lastly, coat the other endplug with elmers and insert it, making it flush with the ends. Allow completed M-80s to dry thoroughly. After drying completely, they are ready to go. Never light and throw them, because there is a slight possibility the fuse will "flash through" or burn to rapidly and cause the M-80 to blow up in your hand. Always lay on the ground, light and run!

Block busters are made the same as M-80s, only with larger tubes. You may want to experiment with mixing in sawdust with the explosive powder as this can increase the loudness of the explosion. Also, mixing in about 1/3 (by weight) magnesium powder seems to add to the effect. Note: Commercial blackpowder powder burns to fast and does not work nearly as well as the above mixture in making M-80s blockbusters etc.

Cherry bombs are made the same as M-80s, but instead of paper tubes, you take two little half circle paper cones (available from distributors), put a hole in top, insert fuse and about 1/2 fill with powder. The halves are glued together, the whole circle is then dipped in elmers and then rolled in sawdust. The assembly is then allowed to completely dry, forming a very hard outer shell. The shell can then be spray painted the traditional red, or black etc. if desired

The following are the suppliers of chemicals, casings, fuse etc. to make fireworks:

Westech Corp.  
P.O. Box 593  
Logan, UT 84321  
(Catalog \$2.00)

Pioneer Industries  
14A Hughey St.  
Nashua, NH 03061  
(Catalog \$1.00)

Pt. 2 of this article will discuss more advanced items such as whistle rockets, fountains etc. Have fun, but please be careful and use common sense ! Also remember the illegal nature of completed fireworks in many states.

Send any comments, questions, new formulas etc. to:

TAP C/O The Magician

## Random Ramblings No. 1

### COSMOS

BY: PAUL MONTGOMERY

It is said that by 1984 unless you have some knowledge of computers, you will be unemployed. By 1984 computers will have proliferated into various aspects of all jobs. Back in the early 70's, a Blue Box was a big cumbersome device with many separate oscillators. Now the state of the art involves digital synthesis of MF frequencies. Analog tone generation is facile. In this column and separate articles I hope to familiarize you with various computers, and their functions. TAP is here to help you delve ahead into expanding technological fields. This would be a good time to get your computer making friends to subscribe.

Before I explain the wonders of the Bell's COSMOS computer system, I'd like to make a few random comments (thus, the name of this column). POWER BUSS UNINCORPORATED - Please get in touch with me via TAP.

MUSHROOM & SPOOL DRIVERS: Al Bundy, in #67, explained how to pick locks with mushrooms and spool pins. His article was somewhat inaccurate. As a professional physical & computer security consultant, I can say that picking mushrooms and spools is almost impossible. To pick them, you must pick all the pins at once. To do this, you need a E-Z PICK gun, or the equivalent. These provide the best results. If the lock is a HEDECO brand high security cylinder, forces it entirely.

AN INTERESTING THING HAPPENED THE OTHER DAY DEPT.: A few weeks ago, I reluctantly operated on my 9900 model, and wrote a computer program to dial numbers sequentially, and look for a computer carrier. I ran it in the middle of the night for two consecutive days. 2500 wake-up subscribers later, the Bell's anonymously began cutting off my phone at night for the next three days. Finally, after I raised a little hell, and threatened to call the local Bell security office charging employee sabotage (HAI mean that Kurnie Rude??), they left my phone alone. I've been a bit resistant to run the program since, though...

DID YOU KNOW DEPT.: The billing computer center for all of Pacific Telephone and Nevada Bell is in here in California. I was talking to an employee up there, and learned several interesting things. Number one, there is a big thick book chained down to the console in the "water room" that lists virtually ALL computer dial-ups into misc. Bell System data processing centers. If any B&E people should obtain one, I will purchase a copy from you...Number two, one billing run prints bills with FICTITIOUS phone numbers. If you are an important person, you can request your bill to be printed with a fictitious phone number. That way snooty mailmen can't get your phone number. Lets all call our 3.0's and request fictitious billing numbers...Thirdly, one of the runs they do is to print out a H&E street address directory for all of northern California...Non-Published numbers and all. Wouldn't you like one of those? Lastly, the Bell credit card you get is only one of about five other forms that are printed at the same time your C.C. is printed. I wonder who gets all the other copies??

COSMOS: COSMOS is a computer system which is in use in many parts of the Bell System which handles main-frame operations. It contains everyone's phone numbers, Office equipment numbers, cable/pair numbers, class of service, etc. It is used to automate the frame in your local C.O. by printing a list at the beginning of each day, telling them what numbers to disconnect, and connect. If you can access COSMOS for a particular area, you can connect/disconnect/change anyone's phone number, or just access the afore mentioned info. Cable/pair numbers are very handy to wire-tappers, or people who like to fiddy-back modems to computer dial-ups. COSMOS is run on a UNIX system. Some typical accounts include: NE02, MF02, COSMOS, LA02, etc. The more

important accounts used for service order entry are: BIN, ROOT, COM, COM1, COM2, etc. Some have no passwords, while others have 6 character passwords such as SMMDF, BSLAC, WETEST, RINGIT, etc. (As you can see, the TAP Board uses COSMOS).

Well, I'm out of space. My next column will explain the use of COSMOS for devious things, and include a Southern California dial-up to practice on. If you have questions or comments, please write me at TAP.

## If you want to cut your phone bills, cut out this chart.

Back issues are \$ .75 each. Issue #50 is \$1.50.

### INTERNATIONAL LAW: JURISDICTION by Dr. Atomic

How far does the jurisdiction of the United States go? One would reasonably suppose that it covers all of the territory and out to sea for two hundred miles. There are, however, international situations where the question of jurisdiction is not clear cut.

For example, Mr. "A" sells 100 pounds of hashish to Mr. "B" (who is an American) at a bar in Kabul, Afghanistan. Later, Mr. "B" gets arrested in the U.S. with the hashish, and he implicates Mr. "A" as the supplier.

The question is, is Mr. "A" criminally liable for the sale of the hashish if the sale took place outside of U.S. territory, and in a country where hashish was legal? The answer, unfortunately, is Yes, he is liable. The jurisdiction of the U.S. extends further than one would reasonably expect because of its conspiracy laws:

From U.S.C.A., Title 21 as 963: 11. Overt Act. It was not necessary to conviction for conspiracy to import narcotics that it be shown that defendant committed an overt act within the U.S., where other members of the conspiracy did so. U.S. v. Santa-La Luz, CA Cal. 1971, 443 F2d 413.

And from Rivard v. U.S., 5 Cir. 1967, 375 F2d 882:

7. Criminal Law (key) 97(3). Man who outside of a country willfully puts in motion a force to take effect in it is answerable at place where evil is done; acts producing detrimental effect within it, justify state in punishing cause of harm as if he had been present at effect, if state should succeed in getting him within its power.

If the state wants to prosecute someone for an act done outside of its jurisdiction, and if that person is located outside of U.S. territory, the State often succeeds in getting them within its power by kidnap, especially if extradition is not possible. The U.S. kidnaps people from all parts of the world -- both citizens and non-citizens alike. And there are many kidnappings, mostly for narcotics offenses. Government agents are known practical, to facilitate a smooth kidnaping. Also, Judges are not concerned how the defendants got brought before their benches, and they are not sympathetic to complaints of kidnap.

# LETTERS

Dear TAP:  
Recently the Rolling Stones played at the Coliseum here in Los Angeles. Of course I "phone phreaked" my way backstage (see enclosed Xerox of The Pass...), but to fill the time between bands I brought along 100 copies of TAP to distribute amongst the masses. Taking whatever donations I could get (\$13.40 is enclosed) I met alot of other phreaks this way.  
It's a great way to help Fuck The Bell System and make new acquaintances at the same time.

TOM EDISON  
TAP

Dear Tom,

How are you? I hope fine.  
I hope that you don't have to go out of business. You are an inspiration to me and many others like minded folks fed up with big-shots ripping us off left and right.  
I have been sending your return envelopes and flyers to a number of CONSUMERTRONICS CO. customers who ask about the kind of topics you are into and I have recommended in several times (and will do so again) in our National newsletter, REBEL.  
I felt left out that you did not carry an ad for us. Can you do me the small favor of letting me know about one month prior to publishing TAP that you are nearing a deadline and for us to get our ad in. At that time, I will gladly do so. However, I do not like to tie up ad money for three months or so and sometimes we forget about when your publication is ready to come out. We will place an ad with you 100% of the time if you only let me know about a month in advance.  
You should also raise your subscription rate. I am far more interested in you guys surviving then being cheap until you go out of business. There is nothing shameful in making a little money. Also, try producing a book - let's say, on all the different colored phone boxes articles you have published over the years in some kind of cohesive form. That makes a lot better sense than selling T-Shirts and ink pens. I am sure that many countercultural medias would give you good publicity and coverage if you could do so. You might try to interest a rich liberal to help you with financing the book project.  
Thank you for your time.

Best Regards,

*John*  
Resident, CONSUMERTRONICS CO.

Dear Tom;

I love you when you get tough! Your GODFATHER approach was original and well taken. Maybe TAP needs a commander instead of an editor-in-charge. Put me down for two oens and a renewal.

### This is a stickdown

WAVERLY One - Sticky fingers were involved in a drug store robbery, but the victims lost them out the thieves.  
Waverly police say two men entered the Waverly Drug Store just after closing time Monday and took an undetermined amount of money and drugs at gunpoint.  
Before they fled, the men used epoxy to glue the hands of the store's employees to the floor to try to make certain they couldn't alert the authorities, officers said. But the employees pulled themselves loose and called police, said Capt. Mike Corwin.  
No injuries or arrests were reported.

Dear Tap,

Well, I see you're starting to join the real world & exercise a small power play. Don't know about the rest of your subscribers, but it worked with me! Here's 2 bucks for one of your "Machlavelli Anniversary Pens" and a "Ma Bell" patch. Remember,....threats always beat pleas!

Dear Readers,

This is an open letter to all of you, especially those who have been reading TAP for a few years. Recently it seems that TAP has been publishing an ever-increasing amount of information on drugs! I'm sure that this is because you people are sending this shit in, and not phone info...now, I certainly don't object to anyone's right to get high and fly, but fuckin' A, are we losing sight of what TAP was originally intended to be?  
I feel this way: There are enough fucking newspapers, magazines, and other periodicals that publish shit on drugs! Why waste valuable TAP space on shit that can be found all over the place? TAP, as far as I know (correct me, please, if I am wrong) that publishes PHONE INFO on a regular(?) basis! So if you want to read about drugs, buy a drug rag. If you want to write about drugs, send it to your mother. And if you DON'T want to read about drugs, send in a goddamn phone-related article to TAP! And remember,

F T B S !!!!!

At every opportunity...in every conceivable way...  
...for every possible reason...

Frank T.B. Schuster

Dear People of TAP,

A colleague of mine and I recently recieved all of the TAP (VIPL) back issues. They are very hard to put down (like a good book). Even though some of the material is almost a decade old, it is still very refreshing. Many of the past issues have some harsh language directed at subscribers to get them to contribute in some way. This tactic is justified. Consider the work, time, energy, and motivation it took (and still does) to produce such material. No matter what we are charged (within reason) we are getting a barsin. If it weren't for Abby, Al, Tom, etc., we the consumers of this invaluable informational service, would just be sucking our thumbs. Organization is the key to power, and that is what TAP does. I am a computer programmer & engineer at a midwestern University. At present I am constructing a small computer that will do "everything". I still have some more readings to do to find out what "everything" is. It shall be called the "OMNI BOX". Considering what it will do it will be small. There is a lot of work and debugging that will have to be done. Be patient, I will have it by Christmass '81! And when I do, it will be yours.

Thanks for existins

# Classified

The TAP Classified Ad Sheet is published as a service to our readers. All ads **MUST** be typed and camera ready. Ads will appear in the next ad sheet unless they arrive after printing deadline in which case they will appear in the following ad sheet. The cost per ad per issue is \$4. If you wish to preserve your anonymity, TAP Box numbers are available at the cost of \$5 per ad per issue. This extra cost is for the postage to mail you the replies to your ad. Full page ads cost \$12 and half-page ads cost \$6. Payment must accompany all ads. Send cash and get a 10% discount on all ads. Address all ad requests to: **TAP, Room 603, 147 West 42nd Street, New York, N.Y. 10036.**

## Continental Spectator

IN OUR 17th SWINGING YEAR

EVERYBODY SWINGS WITH "CONTINENTAL SPECTATOR"

## GAS FO' ALL!!

FED UP WITH THE HIGH COST OF GASOLINE  
AND DIESEL FUEL? SICK AND TIRED OF  
BEING ROBBED AT THE PUMP EVERY TIME  
YOU FILL UP? The ultimate energy survival  
publication is finally here! We have penetrated  
the top secret files of the \$1 billion oil companies  
to pry loose 15 effective simple, quiet and quick  
methods of ripping off gasoline and diesel fuel  
at the pump! No special skills, strength, apti-  
tudes, luck, intelligence or prior training is  
required.

**GAS FO' ALL!!** Completely describes and  
illustrates (including many photographs) these  
15 easy popping methods, applicable to ALL  
MECHANICAL AND ELECTRONIC GAS AND  
DIESEL PUMPS AND DISPENSERS. One  
method stops the registration (but not the fuel  
flow) simply by placing a strong permanent  
magnet on the outside of the pump! Most  
methods require a few simple hand tools.

**GAS FO' ALL!!** IS ONLY \$18. ORDER TODAY!  
This new, copyrighted publication is so  
extremely controversial that we cannot guarantee  
later availability at any price. **SOLD FOR  
EDUCATIONAL PURPOSES ONLY.** NOTE: We do  
not sell, trade, lend, lease or give away our  
mailing lists. Pay \$2 extra for insured mail of  
this and the rest of your order. Free brochure of  
our dozens of other survival publications sent  
with order (otherwise \$1).
